PROFESSIONAL SUMMARY

Systems and automation professional with hands-on independent project experience supporting Python/C# event-driven applications across Windows and Linux. Builds observability, safeguards, runbooks, and test evidence; brings six-plus years of operational ownership and employee training in high-volume environments. Targeting Jacksonville application support, systems integration, production support, and operations technology roles.

TECHNICAL SKILLS

Support & Reliability: incident triage, root-cause analysis, monitoring, structured logging, reconciliation, runbooks, fail-closed controls

Languages & Data: Python, C#, PowerShell, SQL/SQLite, PHP, HTML/CSS, pandas, NumPy, JSON/JSONL, CSV

Systems: Windows, Linux, WSL, Docker, systemd, SSH/SFTP, scheduled tasks, socket integrations

Testing & Delivery: Python unittest, GitHub Actions CI, regression testing, artifact-led validation, rollback planning

INDEPENDENT TECHNICAL PROJECTS

Reliable Event Bridge - Sanitized Engineering Proof

Python | unittest | GitHub Actions | JSONL

- Built a domain-neutral reference implementation of fail-closed handshakes, connection generations, idempotent command admission, bounded queues, strict receipt correlation, and reconcile-only recovery.
- Validated 11 automated contract tests and a Python 3.11-3.13 CI workflow without exposing production strategy, model research, credentials, or private event records.

Real-Time Systems Reliability Platform - Independent Project

Python | C# | PowerShell | Windows/Linux | Structured event data

- Developed and operated a cross-language event-driven platform; hardened replay protection, execution correlation, reconnect behavior, stale-state guards, queue controls, and explicit safety stops.
- Built an evidence trail across intent, gating, acknowledgements, terminal state, health summaries, and outcomes to isolate failures at the layer that actually broke.

Agent Orchestration and Operations Bridge - Independent Projects

Python | SQLite | Discord | SSH/SFTP | systemd

- Designed durable task state, role-based routing, approvals, recovery behavior, and an allowlisted Windows-to-Linux sync path with heartbeat evidence and service supervision.

PROFESSIONAL EXPERIENCE

The Home Depot

Mead, CO

New Associate Coach / General Warehouse Associate

Jun 2024 - Present

- Selected for the Voice of Associates team and promoted to New Associate Coach within four months; train and support new hires in safe, efficient high-volume distribution procedures.

Walmart Distribution Center

Loveland, CO

Replenishment Associate

Jan 2024 - Jun 2024

- Maintained accurate stock flow and coordinated replenishment across shift transitions to support continuous warehouse operations.

Target Distribution Center

Tifton, GA

Team Member Trainer / General Warehouse Worker

Sep 2021 - Oct 2023

- Advanced from freight unloading to equipment operation and employee training while supporting receiving operations handling about 10,000 cartons daily.

Shakey T's Polish & Installations

Lake Park, GA

Office Manager / Electrical Installer

Feb 2019 - Sep 2021

- Progressed from shop-floor work to electrical installation and office operations, including troubleshooting, scheduling, customer service, and inventory control.

EDUCATION

Bellevue University - Online | Bellevue, Nebraska

Bachelor of Science coursework, Computer Information Systems - 30 semester credits completed
